

CivicPulse

Civic Issue Reporting & Resolution Platform

Mysuru City Corporation — A Digital Transformation Initiative for Responsive Urban Governance

Digital complaint lifecycle • AI routing • live tracking

The Challenge: Mysuru's Civic Infrastructure Crisis

Four recurring civic pain points addressed by CivicPulse

01 Roads & Footpath Deterioration

Poorly maintained roads and internal street networks across expanding outskirts; footpath encroachments endangering pedestrian safety in key city areas.

02 Water & Drainage Failures

Unfinished drinking water projects affecting multiple wards; inadequate stormwater drainage causing severe monsoon-related flooding.

03 Air Pollution Crisis

Unreated sewage flowing into major waterbodies despite ₹150+ crore investments — a growing environmental and public health emergency.

04 Low Complaint Transparency

Citizens have no reliable tracking mechanism for submitted complaints, resulting in repeated grievances and eroding public trust in civic administration.

ward-level issue network

Current System Limitations

Why the status quo is failing

CURRENT COMPLAINT FLOW

Manual Processing

Citizens must physically visit MCC offices or submit written applications — a significant barrier for most residents.

Slow Response Times

Average resolution spans 7–15 days with inconsistent departmental follow-up and no accountability chain.

No Transparency or Tracking

Complaints are misrouted to wrong departments, historical data is lost, and SLA compliance cannot be measured or enforced.

Problem pattern: MANUAL → DELAYED → UNTRACKED

Introducing CivicPulse: Three-Step Solution

Simple for citizens. Powerful for administrators.

Report → AI / location routing → department action → citizen confirmation

CivicPulse compresses the entire civic complaint lifecycle into a seamless, digitally governed workflow — from first report to final resolution.

Key Features & Functionality

Core capabilities shown as an end-to-end platform architecture

01 Multi-Channel Reporting

Web portal, mobile app, SMS, and walk-in support ensure every citizen can report issues regardless of digital access.

02 Smart AI Classification

AI-powered categorization across Pothole, Streetlight, Garbage, Water Supply, Drainage, and more – reducing manual sorting.

03 Location Integration

Automatic ward and zone identification enables priority-based routing to the correct MCC department instantly.

04 Real-Time Tracking & Escalation

Unique Complaint IDs with live status updates (Open → In Progress → Resolved) and automatic escalation for SLA breaches.

Expected Outcomes & Benefits

Target improvements defined in the proposal

85% +

Auto-Routing Accuracy

AI classification reduces manual delays and departmental misrouting errors significantly.

**24–
48h**

Target Resolution Time

Down from the current 7–15 day average — a transformational improvement in service delivery.

90% +

SLA Compliance Rate

Up from an estimated 60% baseline, driven by automated escalation and accountability dashboards.

85%

Reduction in Manual Workload

Administrative overhead cut through intelligent routing, digital records, and analytics-driven governance.

Implementation Roadmap

Six-month deployment plan with phased expansion

DEPLOYMENT AT A GLANCE

Full deployment: 6 months

Pilot wards: 2–3 selected zones

City-wide rollout: All 19 wards

Launch: Web + Walk-in

Phase 3: Web, App, SMS, WhatsApp

Post-launch: Analytics & continuous improvement

Technology & Security

Enterprise-grade infrastructure for a scalable municipal platform

01

Cloud-Based Infrastructure

scalable, secure, 24/7

02

Data Encryption

end-to-end encryption

03

API Integration

connect with existing MCC systems

04

Mobile-First Design

responsive citizen experience

05

Backup & Recovery

automated daily backups

06

Compliance

data protection & privacy standards

SECURITY & RELIABILITY

End-to-end encryption

Open APIs for integration

Automated daily backups

Disaster recovery protocols

99.5% + uptime target

24 hours × 365 days

The platform is designed to integrate with existing MCC systems rather than requiring costly legacy replacement.

Success Metrics & KPIs

Performance benchmarks defined for accountability

95%
+

Complaint resolution rate within 30 days of submission

4.5 / 5.0

Target citizen satisfaction score via post-resolution feedback surveys

30–40%

Reduction in administrative overhead through intelligent process automation

Conclusion & Next Steps

Moving from reactive complaint-handling to proactive, data-driven urban management

CivicPulse transforms Mysuru's civic governance by connecting citizens, location intelligence, AI-assisted routing and accountable departmental workflows.

- 1 Stakeholder approval and formal project mandate from MCC leadership
- 2 Budget allocation and vendor onboarding for platform deployment
- 3 Phase 1 pilot launch within 2 months across selected wards
- 4 Full city-wide deployment within 6 months — Mysuru's sustainable urban future begins now

Citizen issue → action → resolution → data-driven improvement
